

**CALL HANDLER INTERFACE WITH PERSONAL
RESPONSE FEATURES AND ASSOCIATED METHOD**

Abstract of the Disclosure

A call handler interface includes a housing, a telephone line port carried by the housing to be connected to a telephone line, and a telephone headset port carried by the housing to be connected to a telephone headset. An amplifier is connectable between the telephone line port and the telephone headset port for amplifying and coupling signals therebetween. A personalized message storage and retrieval circuitry is carried by the housing and is connected to the amplifier for permitting a call handler to store at least one message in a voice of the call handler and selectively retrieve the stored personalized message for playing to a caller on the telephone line.
